Markdown is awesome! - Karthik

If you would like text to appear in **bold**, use two underscores on either side. One underscore in either side for *italics*.

```
library(stringr)
library(ggplot2)
ggplot(...)
function("This is a string")
```

[description of link or the link text](#) TO create a link, wrap the link text in square brackets, followed by the link in parentheses.

Figures are the same syntax as creating a link. But it requires an exclamation mark at the front. And instead of the link text, use the path (or url to an image).
